

Amazon Product Analytics Dashboard

Project Overview

This project is an interactive Power BI dashboard built to analyze Amazon product data and provide insights into product pricing, discounts, ratings, customer reviews, and category-wise performance.

Objectives

- Analyze Amazon product performance.
- Compare product categories.
- Understand pricing and discount trends.
- Visualize customer ratings and reviews.
- Build an interactive dashboard for decision-making.

Dataset

The dataset contains Amazon product information including:

- Product Name
- Category
- Actual Price
- Discounted Price
- Discount Percentage
- Rating
- Rating Count
- Review Details

Tools & Technologies

- Power BI
- Microsoft Excel
- DAX

Dashboard Pages

1. Overview Dashboard – KPI cards for Total Products, Reviews, Average Rating, Average Discount, and Average Discounted Price.
2. Category Analysis – Products, Ratings, and Discounts by category.
3. Customer Reviews – Treemap and donut chart showing review distribution.
4. Price vs Rating Analysis – Scatter plot showing relationship between price and ratings.
5. Product Explorer – Detailed product table with prices, discounts, ratings, and categories.

KPIs

- Total Products
- Total Reviews
- Average Rating
- Average Discount (%)
- Average Discounted Price

Visualizations

- KPI Cards
- Bar Charts
- Treemap
- Donut Chart
- Scatter Plot
- Product Table

Key Insights

- Electronics has the highest number of products.
- Average ratings remain around 4.0+ across major categories.
- Discount percentages vary significantly between categories.
- Higher-priced products generally maintain strong ratings.
- Customer reviews are concentrated in a few major categories.

Conclusion

The dashboard provides a clear overview of Amazon product performance and helps identify pricing trends, customer preferences, and category-level insights through interactive visualizations.
